BC 2.7 INBOUND

Customs Documents Module Guide

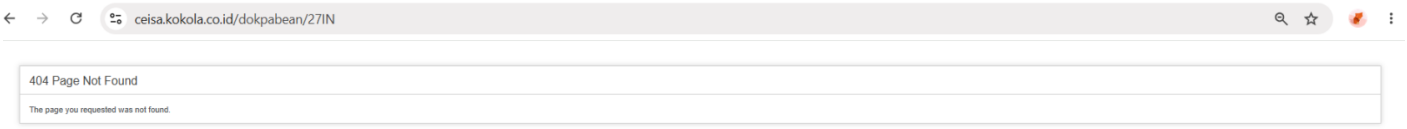

Module Location:

CEISA > Customs Documents > BC 2.7 INBOUND

The BC 2.7 Inbound menu is used to monitor the receipt/inbound of goods resulting from transfers between TPBs. This aligns with the nature of BC 2.7, which can be used for both inbound and outbound movements between TPBs.

Page Display

If the page is available, the system will display the BC 2.7 document from the receiving side. In your screenshot, one of the addresses related to the inbound movement shows a 404 Page Not Found error.

Usage Steps

1. Open the menu.
2. Search for the source document.
3. Match the Application Number.
4. Check whether the goods have been received.
5. Ensure that the “Gate In” or “Received” status appears.
6. Retrieve the response if necessary.

Note

If the page displays a 404 error, the issue must be investigated by the application management team.
