Settings Module Guide

Module Location:

`CEISA` > `Settings`

Display

Explanation

The Settings menu is used to manage the technical configuration of the Local CEISA application. This page contains several configuration options, such as:

- Application Mode
  - Normal: used when the application is operating as usual
  - Maintenance: used when the application is undergoing maintenance or when the CEISA portal configuration is being updated
- CEISA Portal Account Configuration
  This section is used to support the connection between the Local CEISA application and the Government CEISA system.

- Unique BC Document Code
  This unique code is used by the application as part of document identification during the submission process.
- System Information
  This section displays real-time system information, including the application version, server time, and PHP version
