

# Delivery Order Raw

## Report Module Guide: Raw Material Usage for Customs (RMSNSRpt)

### Module Location

Inventory > Delivery Order > Delivery Order Raw Material Usage Report

### Module Objective

This module is a highly specific reporting tool, used to track and report the usage of **raw materials** that are contained within **finished goods** which have been shipped via a Delivery Order. Its primary purpose is for reporting to **Customs (BC)**, especially for companies operating in a **Bonded Zone** or receiving other customs facilities.

## 1. Report Parameters (Filter)

The main page of this module is a form containing various parameters to generate a specific report.

Here is an explanation for each key parameter:

- **Period:**
  - Specify the **From** and **To** date range for the Delivery Orders to be reported.
  
- **Source Document:**

- Select the base document to be used as a reference, generally a **Shipping Instruction**.

- **Tracing Method:**

- **Important!** Select the method the system uses to trace raw material usage, for example, **FEFO RM/PM** (First Expired First Out for Raw Material/Packaging Material).

## 2. Steps to Generate and Upload the Report

1. **Set Report Parameters:** Define all necessary parameters, especially the **Period** and **Tracing Method**.
2. **Display the Report:** Click the **[Display Report]** button. The system will process the data: finding all finished goods shipped in the period, then "exploding" their recipe/BOM to find which raw materials have been used.
3. **View the Results:** The generated report will display a list of the used raw materials.
4. **Link to a Customs Document:** On the results screen, select the relevant **Customs Submission Number** from the dropdown.
5. **Upload the Report:** Click the **[upload to BC]** button to send this raw material usage report to the Customs system.

## Tips & Important Notes

- This is a very specific and crucial module for maintaining the company's **compliance with Customs regulations**.
  - The accuracy of this report is highly dependent on accurate **Bill of Materials (BOM)** data and disciplined recording of Delivery Orders.
  - This module is typically used by the **Exim (Export-Import)** or **Tax Accounting** team responsible for customs reporting.
