Production Plan

Module Guide: Production Plan

Module Location

PPIC > Production Planning > Production Plan

Module Objective

The **Production Plan** module serves as a center for viewing all Production Plan documents that have been created. Unlike other planning modules that might be based on file uploads, this module displays a list of plans that have been created in the system and functions as a starting point for reviewing or printing the details of those plans.

1. Main View (Production Plan List)

The main page of this module displays a list of all Production Plan documents that have been created.

View Explanation

- **View**: This page is a history of all production plans. You can see the **PP Code** (Production Plan Code), **Period Group**, and its schedule.
- **Filters**: You can search for a specific production plan by **PP Code** or a **Date** range.
- **Action Buttons**:

- **[Print]**: The primary button to print the details of a selected Production Plan document.

2. How to Use

This module is a **report or inquiry module**.

1. **Find the Plan**: Use the filters at the top to find the Production Plan you wish to review.
2. **View Detail/Print**: Select one or more plans from the list, then click the **[Print]** button to generate a detailed report of that plan.

Tips & Important Notes

- This module functions as a "gateway" for printing Production Plan documents that are already final.
- This is a tool used by the **PPIC team** to distribute the production plan to related departments, such as Production and Warehouse.
